

## About ESG Insights

This is a service focused on ESG data analysis. We extended our system functionality through our analytics and disclosure platform, Envago. Using this platform, we find publicly available data sources from publicly listed companies to gather information and use it to generate relevant and up to date ESG insights for your sector or industry.

Where companies are listed in overseas stock exchanges, this information is also included. We provide a curated data set that is accurate and free of manipulation.

This service aims at developing a bespoke analysis on ESG data as an indicator for our clients to accurately benchmark their ESG performance against.

ESG Insights reports on the resources industry are currently available. Other commodities and industries can be produced upon request.
