

ESG & SUSTAINABILITY

ESG LANDSCAPE

Many stock exchanges now require ESG disclosure to better manage financial risk. Stakeholders, listed & unlisted, are demanding greater transparency in the disclosure of material, sustainability-related information, & our participation in global supply chains is becoming increasingly dependent upon it.

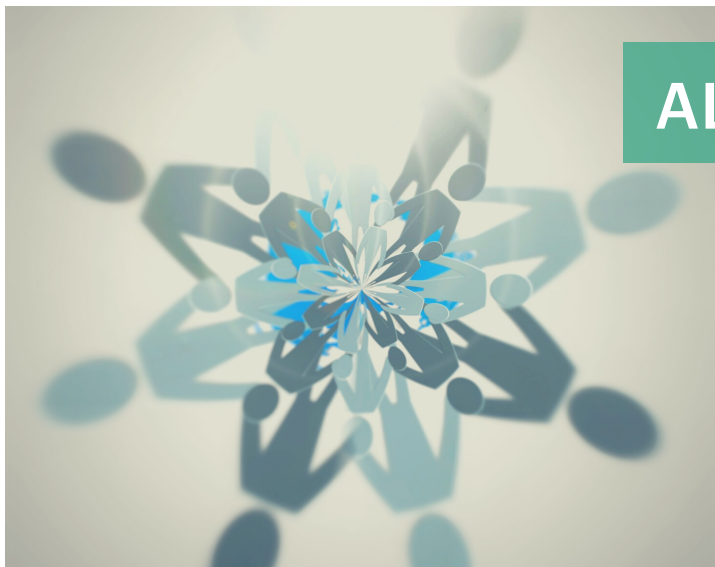

DRIVERS

Customer & investor expectations are rising in an effort to reduce risk & increase accountability. European & UK policy changes (2021-2025) will be a key driver in increasing ESG-related disclosure for goods & service providers participating in global supply chains. It's now key to growth & enduring value.

ALIGN YOUR BUSINESS

Get ahead of the curve. Phased, early adoption of reporting limits your burden. Starting with available data (energy, procurement, fuel, reputation & diversity etc.) is simple & effective. First, identify stakeholders & what's material to report. Next, align your strategy. Then define your baseline & set targets. From here, it's about transparent disclosure of progress towards achieving your targets.

THE PROCESS

1. Prioritise what is material to report.
2. Align activities & outcomes with relevant standards.
3. Manage & schedule data collection & validation processes.
4. Create meaning for stakeholders with data-supported insights & reports.
5. Communicate investor-grade data publicly.
6. Optimise strategic planning & day-to-day decision-making by integrating findings
7. Set targets based on science & deep insights.

BENEFITS

FUTURE PROOF

Protect & optimise your business by using real data to set targets, track progress & meet global disclosure standards.

REDUCE COSTS

Lower capital costs by reducing reputational, physical & transitional risks. Build resilience.

TRANSPARENCY

Increase business transparency & subsequently stakeholder trust through clear & auditable disclosure.

RETENTION

Customers & employees are more satisfied, & want to align themselves with good companies doing good things!

ABOUT US

Greenbase - where science, sustainability & accounting intersect. With 20+ years of experience in environmental & sustainability reporting, we help our clients go beyond compliance in all their environmental & ESG reporting. On time, to budget & audit-ready always. We start with data to help turn ambition into action. Greenbase. Makes Sense.
